COMMERCIAL WINE CABINETS BUILT FOR SERVICE, NOT STORAGE

The Electrolux Professional wine cabinet range is designed specifically for hospitality environments where consistency, accessibility and reliability are essential. Unlike domestic wine fridges intended for occasional home use, commercial cabinets are engineered for constant opening, variable ambient temperatures and the operational demands of bars, restaurants and hotels.

For venues serving wine regularly, storage is only part of the requirement. Maintaining product quality, protecting inventory and ensuring every bottle is ready for service are critical to both customer experience and revenue.

COMMERCIAL VS DOMESTIC WINE STORAGE

Domestic wine fridges are designed primarily for long term storage in stable home environments.

In contrast, commercial wine cabinets are built for active service and high traffic hospitality settings.

In a busy service environment, these differences directly impact wine quality and operational efficiency.

COMMERCIAL WINE CABINETS

- Designed for hospitality service and display
- Built for frequent door openings
- Operate reliably in warmer environments
- Engineered for consistent temperature recovery

DOMESTIC WINE FRIDGES

- Designed for occasional access
- Intended for climate controlled homes
- Slower recovery after door openings
- Greater temperature variation

KEY BENEFITS FOR PROFESSIONAL ENVIRONMENTS

- Tight temperature control for consistent serving conditions
- Rapid recovery after repeated door openings
- Even airflow throughout the cabinet
- Stable humidity to protect cork integrity
- Reduced vibration to maintain wine quality
- UV protected glass to minimise light exposure
- Temperature alarms to protect valuable stock

THESE FEATURES ENSURE WINE IS MAINTAINED IN OPTIMAL CONDITION THROUGHOUT SERVICE, NOT JUST DURING STORAGE.

OPERATIONAL ADVANTAGES FOR HOSPITALITY

Commercial wine cabinets are designed to support staff workflow, maintain service speed and deliver consistent performance during busy periods with frequent access and continuous operation.

- Flexible shelving to accommodate real bottle sizes
- Service friendly internal layout
- Clear product visibility for front of house display
- Easy access during peak periods
- Consistent temperature during high usage

These operational benefits help improve service efficiency while supporting premium wine presentation.

BUILD QUALITY AND RELIABILITY

Commercial environments demand equipment that performs continuously. These cabinets are constructed using heavy duty components and materials suited to constant operation.

- Robust construction suitable for daily use
- Designed for continuous running
- Reliable performance in busy environments
- Reduced risk of temperature related stock loss
- Long term durability under commercial load

This level of build quality supports operational reliability and helps protect valuable wine inventory.

CAPACITY OPTIONS FOR DIFFERENT VENUES

The range is available in two practical capacities to suit varying hospitality requirements.

Both capacities deliver the same commercial grade performance and temperature consistency.

50 BOTTLE MODEL

- Ideal for smaller venues, bars and boutique restaurants
- Suitable for curated wine lists
- Compact footprint for front of house positioning

170 BOTTLE MODEL

- Designed for restaurants, hotels and high volume venues
- Supports broader wine selections
- Suitable for back of house or feature display installations

BUILT TO PROTECT YOUR WINE INVESTMENT

A domestic wine fridge is designed to store wine. A commercial cabinet is designed to support service, protect inventory and maintain consistency in every glass served.

For hospitality operators, the difference is not just storage. It is reliability, performance and confidence during service.

A COMMERCIAL WINE
CABINET PROTECTS EVERY
BOTTLE YOU SELL AND
EVERY GLASS YOU SERVE
